## High Performance 802.11n Dual-Radio 3x3:3 access point

AEROHIVE NETWORKS AP350 access points are high performance 802.11n access points (APs) with cloud-enabled management, on-demand provisioning, and integrated tools like spectrum analysis and application visibility and control.

The AP350 provides high-performance 3x3 three spatial stream MIMO on dual concurrent (2.4Ghz and 5Ghz) 802.11n access radios and is designed for high bandwidth wireless enterprise environments. In addition, the AP350 can support legacy 802.11a, b, and g clients and interoperate with the rest of the Aerohive Cooperative Control devices to provide a seamless enterprise-class experience for all connected users.

### Key Features and Benefits

#### Cooperative Control

All Aerohive access points are built upon the deep, feature rich HiveOS operating system. HiveOS is the backbone of the Aerohive Cooperative Control architecture, and allows the access points to organize into groups or "hives" that coordinate advanced features such as layer 2/ layer 3 roaming, cooperative RF management, security information, and mesh networking without requiring a controller. Cooperative Control provides all the benefits of coordinated, nextgeneration Wi-Fi with lower Total Cost of Ownership (TCO), more reliability, more scalability, higher performance, and with a focus on truly optimizing mobility in a mobile first enterprise.

#### High Performance, Secure Wi-Fi with On-Demand Provisioning

The Aerohive AP350 is a 3x3:3 high-performance access point with integrated features such as RADIUS, 802.1X security, Captive Web Portal, and cloud-based management. By integrating with the Aerohive Cloud Services Platform, the AP350 can be brought online simply by plugging it in. It will automatically find the HiveManager, either in Aerohive's public cloud or on a customer premises, download complete configuration, security, and corporate policies, and instantly provide service for connected devices.

#### Integrated Application Priority and Control

By using the robust Quality of Service (QoS) and stateful firewall built into Aerohive access points, the AP350 supports optimizing user application experience on the network. Aerohive access points allow an administrator to create customized user profiles based on context, such as identity of the user, device type, location, and time of day, to prioritize or block applications based on what is critical to that particular user. This user-focused approach ensures every user experience is optimized for mobility.
