BARTENDER IN A BOX SERIES

Comprehensive Solutions for Age Verification

Bartender In-a-Box | Age Verification is an effective way for bars and restaurants to determine the legal age of patrons. This age verification package is an 'all-in-one' solution that will quickly read and store the data encoded in bar codes and magnetic stripes from any state issued driver license, identification card, or military ID. Once an ID is 'scanned' or 'swiped', the identification card holder's name and age is viewed on the display screen. Additional benefits include:

- Alarm will sound if patron is underage

- Vibration feedback for noisy environments

- Data is time-stamped using an internal real-time clock

- Date is protected and automatically deleted after 7-days

- No PC or manual management of data required.

Ensure your bar or restaurant is only serving to patrons of legal age.

Bartender In-a-Box | Age Verification is exclusively available through BlueStar!
