

Message-On-Hold Announcers

ProHold™ DRDX™

Introducing the Bogen ProHold™ DRDX™ Digital Message-On-Hold announcers. The unique Bogen ProHold DRDX system is the first to feature digital downloading of On-Hold message programs directly from the studio to the player unit at the user location.

With the Bogen ProHold DRDX, the user gets all of the advantages of remote program download along with the significant benefits of the DRDX's market-leading digital program transmission.

Remote download provides the ultimate in worry-free performance to the end-user. All message and music loading is done by their professional On-Hold studio without requiring the user to "lift a finger."

The Bogen ProHold DRDX's state-of-the-art digital transmission provides many more benefits to the user than analog download systems available from other suppliers.

FEATURES

Power Requirements

9V AC Power supply (included)

Coding Method

IMA Standard

Sampling Frequency

128 Kilobits/sec (KBPS)

Memory Capacity

PRO6 DRDX- 6 minutes

PRO8 DRDX - 8 minutes

PRO12 DRDX- 12 minutes

Memory Backup

Non-volatile FLASH Memory

External Speaker Output (RCA jack)

1 watt into 8-ohm

LINE Output (RCA jack)

600-ohm transformer balanced

LINE Input (RCA jack)

Local analog pre-amp input

External Controls

VOLUME, SPEAKER on/off

External Indicators (LEDs)

POWER - (red)

PLAY - (green)

LOAD - (green)

PSTN Connection

Standard RJ11 jack

Modem Line Speed

33.6 KBPS basic rate MNP5/V.42

bis compression/ECC

Mounting

Wall or desktop

Dimensions

7" x 10" x 3.5"

Shipping Weight

4 lbs.

The ProHold DRDX system from Bogen Communications was developed to revolutionize "remote downloading" of on-hold message programs. The DRDX system is the first to download programs digitally via modem to player units at the customer's site. The ProHold DRDX offers many key benefits to the user:

Remote Download. No tapes to change, no levels to set and no controls to operate — no worries once the remote unit is installed. This is a big advantage to multi-location businesses that frequently change their promotional messages.

Digital Transmission & Control. Digital remote-downloading not only supersedes analog downloading as with current state-of-the-art technology, it offers major advantages to the user.

Simultaneous error correction. During downloading, the base station and remote player unit constantly exchange digital information, correcting transmission errors instantly. Even if there is noise on the line, every download is complete— first time, every time.

Technology you can buy with confidence. The ProHold DRDX not only downloads message & music programs, it also allows the operational software of the remote unit to be re-loaded. Remote units can receive upgrades as future software versions become available. Technology won't pass you by with the DRDX.

Flash Memory. The use of flash memory technology in the DRDX remote units saves programs for 15 years in the event of power failure. Once power is restored, the unit automatically resumes playing its program, without the necessity of dialing the studio and waiting for a program to be downloaded.

Reliability You Can Count On. The ProHold DRDX system is brought to you by the world leader in digital on-hold equipment, and is the result of over 65 years of market leadership in sound, communications, and telephony. The DRDX is maintenance-free and backed by an exclusive five-year manufacturer's limited warranty. The ProHold DRDX system allows the user to simply set it and forget it!
