- Includes Generic Protocol & Configuration Wizard for New Device Support

DigiOp Transaction Manager (DTM) is a point of sale software application which provides an easy to use interface between DigiOp digital video recorders and transaction related devices such as cash registers, automatic teller machines (ATM) and weigh scales. DTM assists loss prevention professionals in the management of live or recorded transaction data and video. Exception based reporting and case management capability make DTM the market leading point of sale application. Access to transaction data and video can be obtained either locally or remotely making DTM perfect for both small retail and global enterprise applications.

Additional benefit is obtained through use of resizable screen images, simple transaction review, selectable search criterion, automatic synchronization of device and DVR times and multiple camera support for selected transactions.
