

Dialogic[®] 2000 Media Gateway Series

The Dialogic® 2000 Media Gateway Series (DMG2000 Gateways) is a set of turnkey appliances that seamlessly merge traditional PSTN technology with IP networks. These economical gateways help consolidate typically separate voice and data networks and provide new and differentiated communication services. Without making radical, disruptive, and expensive upgrades to existing PBX equipment, service providers and enterprises can realize the benefits of a converged voice and data network with these gateways.

Features	Benefits
Provides an interconnect between legacy PBXs and various IP endpoints	Enables communication between a circuit-switched telephony network and Session Initiated Protocol (SIP) compatible remote devices such as IP voice mail, unified messaging applications, and IP phones
Available in single, dual, and quad density T1/E1 rack mount appliances	Offers a range of product densities to fit the needs of a variety of applications and business sizes
Compatible with a variety of popular PBX manufacturers including Avaya, Mitel, NEC, Nortel, and Siemens	Protects investment in legacy telecommunications equipment and allows a phased migration to IP
Support for IP load balancing and IP fault tolerance	Allows the ability for inbound (TDM-to-IP) calls to round-robin between available media servers and automatically routes calls away from unresponsive media or proxy servers
Supports supplementary services on CAS, QSIG, Euro ISDN, NI2, DMS100, 5ESS protocols, enabling call transfer, call hold, MWI, and call party information	Helps retain key supplementary services in the new IP environment
Seamless interoperability with Dialogic® Host Media Processing (HMP) Software	Provides the option for customers to build enhanced applications on top of base gateway and PBX functions, and make those applications available on legacy handsets
Supports configuration via serial, telnet, and a web browser including context-sensitive Help	Easy to install, configure, debug, and maintain
IP security features include TLS, SRTP, and HTTPS	Enables secure communications for SIP messages via TLS, for media stream via SRTP, and for web interface via HTTPS

Applications

- · Centralized VoIP and FoIP applications servers, including IP-based voice mail and unified messaging
- Interactive voice response (IVR) and announcements
- IP PRX
- Voice over Internet Protocol (VoIP) extension to branch offices
- Contact centers

The DMG2000 Gateways can be installed and configured "plug and play," reducing the total cost of ownership. Operations, Administration, and Maintenance (OA&M) features such as network alarm events, remote management enabled by a user-friendly web interface along with advanced diagnostics and administration tools make the installation and maintenance of these appliances quick and easy.

The cost of the DMG2000 Gateways makes them a unique and ideal solution for enterprises interested in deploying a variety of applications such as PBX extension, remote office connectivity, long-distance consolidation, call centers, and IP media servers. Available in a 19-inch standard rack mountable chassis, these appliances are also ideal for service providers offering hosted IP-PBX, IP Centrex, and enhanced messaging servers.

Save Time, Money — and Existing PBX Equipment

A large base of enterprises today have legacy PBX equipment installed in their premises. These enterprises want to cut their communications costs by implementing a VoIP solution, but wish to retain their investment in legacy equipment. Because these enterprises have a diverse base of PBX equipment, solution providers need a product that will help them address this wide customer base with a single, simple solution.

The DMG2000 Gateways have been tested for interoperability with legacy PBXs from vendors such as Alcatel, Avaya, Mitel, NEC, Nortel, and Siemens. This testing lets solution providers focus on customer applications rather than integration efforts with legacy PBXs.

In addition to providing IP connectivity, the DMG2000 Gateways support key supplementary services such as call transfer, call forwarding, call hold, message waiting indicator (MWI), and call party information on most T-1/E-1 protocols including CAS, QSIG, Euro ISDN, NI2, DMS100, and 5ESS, enabling customers to retain application-critical PBX functionality in the new VoIP environment.

Advanced Voice Features Provide Superior Caller Experience

The extensive features of the DMG2000 Gateways can help build a reliable, high-quality VoIP application. The gateways provide the interoperability needed for high-quality media streaming with a wide variety of industry-standard IP endpoints by supporting advanced coders including:

- G.711 (packet size 10 ms, 20 ms, and 30 ms)
- G.723.1
- G.729ab

Echo cancellation is essential for packet-switched networks to carry voice traffic successfully. The DMG2000 Gateways conform to ITU G.168 echo cancellation with a tail length up to 128 ms. Voice quality is further enhanced with features such as comfort noise generation, silence detection, and adaptive jitter buffering.

The DMG2000 Gateways have QoS features, including type of service (TOS)/IP precedence, and DiffServ, providing a low-latency, high-reliability path for sensitive voice traffic through today's networks. In addition, the gateways support advanced call progress analysis on all channels.

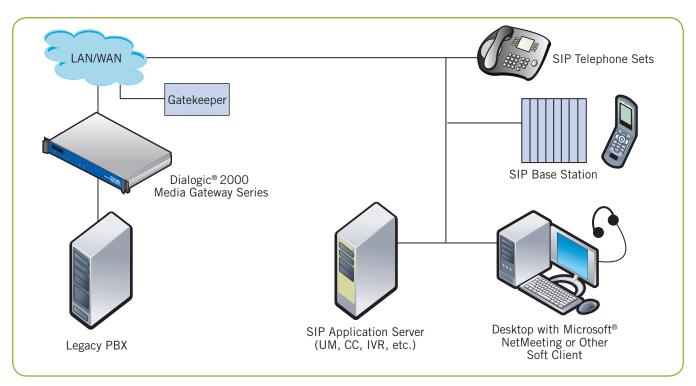

Figure 1. Bridge the Gap Between PSTN and IP End Points

Configurations

The DMG2000 Gateways provide a cost-effective way to connect various IP end points to the circuit-switched network (see Figure 1), eliminating the need to swap out legacy PBXs and helping to protect telecom investment.

The DMG2000 Gateways along with Dialogic® HMP Software support the development of cost-effective IP media servers accessible from both PSTN and IP networks (see Figure 2). IP media servers can provide a central and efficient messaging server in existing Time Division Multiplex (TDM) voice infrastructures by servicing remote locations via an IP network.

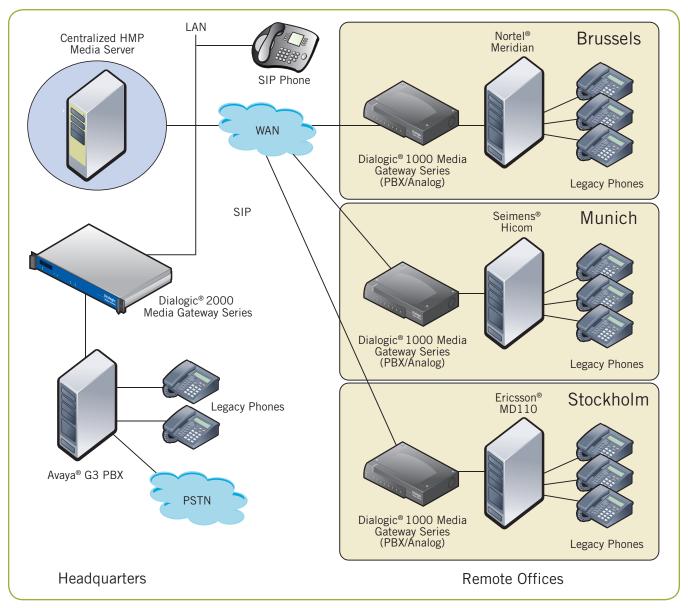

Figure 2. Converged IP Media Server Architecture

Media gateways help service providers and enterprises offer cost-saving voice, data, and multimedia convergence services. One such solution is an application for telecommuters.

The number of employees working from home on a permanent or periodic basis continues to rise. These employees need full access to company voice and data services. By installing a DMG2000 Gateway (see Figure 3), employees working from home can have the same telephony experience as their counterparts in the corporate office. They can make and receive calls and access other features such as voice mail from home, just as if they were in the office. Their office extension can be "bridged" onto a gateway port so that their "phone" rings, no matter where they are working. This enhances productivity, reduces costs, and improves both customer and employee satisfaction.

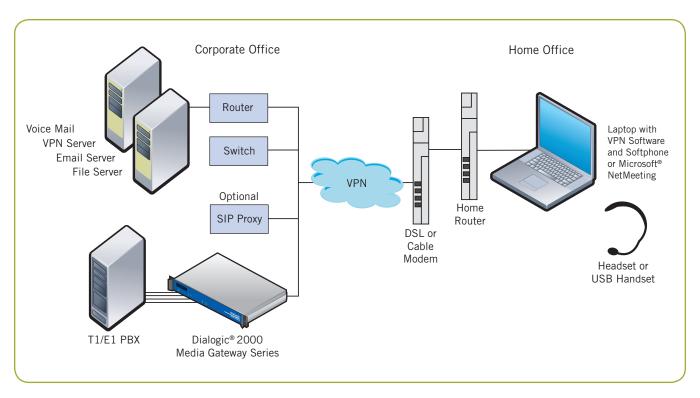

Figure 3. Next-generation Application Solutions — Telecommuting

The DMG2000 Gateway is able to address SIP trunking, PSTN toll bypass, and other access gateway applications. The gateway provides TDM-to-TDM routing as well as the traditional SIP-to-TDM and TDM-to-SIP routing. With this routing addition, as well as the addition of failover relays for direct TDM-to-TDM connectivity in case of power failures, or IP network issues, the gateway provides a survivable telephony connection (see Figure 4).

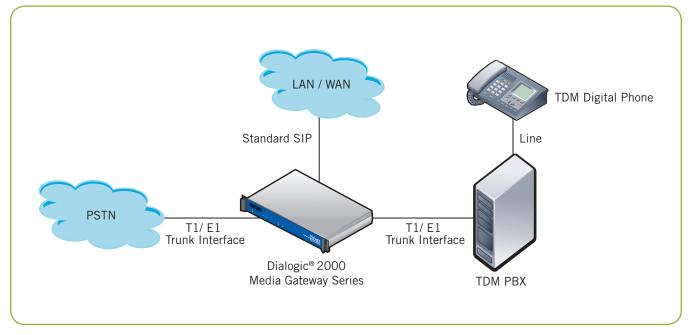

Figure 4. Survivable Access Gateway

Technical Specifications

TDM Port Density by Model

 DMG2030DTI
 1 T1 or 1 E1

 DMG2060DTI
 2 T1 or 2 E1

PBXs Interoperability

Any PBX that follows one of the protocol specifications listed in the Technical Specifications section will interoperate with the DMG2000 Gateways. The following is a list of PBXs that were specifically tested either in a Dialogic, or a third party, interoperability lab.

Manufacturer	Models	Software Version	Supplemental Service Support					
			Call Party ID	Transfer	MWI			
Avaya	DEFINITY G3	Version 3 or greater	Yes	Yes	Yes			
	\$8500	Communications Manager SW V2.0 or greater	Yes	Yes	Yes			
NEC	2400 IMX	Release 5200 Dec. 92 1b or greater	Yes¹	Yes	Yes ¹			
Nortel	Meridian 1— Option 11c	Release 15 or greater and options 19 and 46 are required	No	No	No			
Siemens	Hicom 300E CS	Release 9006.4 or greater (North American software load only)	Yes ²	Yes	Yes			

For explanation of notes, see Table 7.
