

HONEYWELL VOICE SRX-SL WIRELESS HEADSET

The SRX-SL Wireless Headset features the next generation in Bluetooth® wireless headset technology – making it ideal for light-duty use in warehousing and distribution centers and for retail and home delivery.

The SRX-SL Wireless Headset brings the power of voice-directed work to small- to medium-sized businesses. Providing unmatched communication capabilities via the industry's most advanced speech-recognition technology, the SRX-SL Wireless Headset empowers your mobile workforce to excel in light-duty warehouse, distribution and fulfillment environments, as well as in retail and home delivery applications.

Slim Line Bluetooth Wireless Headset for customer-facing and light-duty voice applications

PERFECT FOR GUIDED WORKFLOWS

The lightweight and ergonomic SRX-SL Wireless Headset is designed for comfort and wear-ability through a full day or shift. User-centric, it frees mobile workers' hands and eyes to maximize their safety and productivity while they achieve higher accuracy rates. The headset's unique component design allows the shared use of electronics while preserving worker hygiene through the use of individual headbands. Expanded capabilities for Android-based operations include hands-free profile (HFP) support and easy-touch device pairing. Updated Bluetooth certification, improved encryption security and wireless update capabilities enable seamless communications with modern infrastructures.

A flip-to-mute microphone functionality gives operators the option to reposition the mic boom quickly and pause their interaction with the voice system – enabling the wearer to engage directly with a colleague or customer. This innovative headset also includes an integrated step-counter that can be used to track worker actions and movement. Both step-counter and boom rotation data can be integrated into labor management systems to distinguish between customer-focused work and inventory or task-focused work.

FEATURES AND BENEFITS

FULL-SHIFT BATTERY

The SRX-SL Wireless Headset's full-shift battery covers a full eight hours of operation and can be recharged to 75% in under an hour when used with compatible chargers. This enables mobile workers to complete more tasks with less downtime, increasing throughput and productivity.

ERGONOMIC, INNOVATIVE COMPONENT DESIGN

The SRX-SL Wireless Headset's lightweight design – engineered to provide users all-day comfort – maximizes flexibility while optimizing hardware use. The device's electronics can be shared among associates who each retain a single-user headband, saving on cost while ensuring their comfort and hygiene.

ANDROID SUPPORT AND COMPATIBILITY

The SRX-SL Wireless Headset features built-in HFP client support for Android applications to ensure seamless compatibility in operations that want to leverage their existing Android infrastructures and Honeywell's Android-based voice software. Connectivity is simplified through a user-friendly, touch-pairing interface that allows mobile workers to pair their headset to an Android device quickly.

SRX-SL WIRELESS HEADSET FEATURES

- Full-shift battery that can be recharged to 75% in under an hour when used with compatible chargers
- Integrated motion sensor for tracking worker health
- Programmable functionalities to add customized triggers and events
- Lightweight and comfortable enough to wear all day through a full shift
- Device features can trigger system actions; for example, raising and lowering the microphone boom pauses voice direction
- Includes an integrated step-counter that can be used to track worker actions and movement

BUILT FOR PRODUCTIVITY

The SRX-SL Wireless Headset pairs seamlessly with Honeywell’s Guided Work solution. Based on rugged, ergonomic hardware and robust speech-recognition software that integrates with leading enterprise resource planning (ERP) providers, Guided Work enables smaller businesses to implement hands-free, paperless, voice-guided workflows quickly while fully utilizing existing warehouse software and mobile technology investments. Highly configurable, Guided Work directs your associates, working both hands-free and eyes-free, through their mobile workflows — such as picking, receiving, replenishment, put-away and cycle counting — to minimize steps and maximize efficiencies.

The innovative component design means your operation can share the SRX-SL electronics, but retain a single-user headband, saving on cost while ensuring comfort and hygiene for your associates.
