

rTooltrack™

Receive it, Tag it, Keep it!

THE SOLUTION

Keeping track of tools, production tooling and specialized equipment is a labor-intensive process, especially in manufacturing. No matter how big your business is, tracking tools is critical to your efficiency. Tool tracking has an even greater impact on operational costs for companies with highly specialized tooling including Maintenance and Repair Organizations (MRO), Aerospace Manufacturers, Heavy Equipment Manufacturers, Defense Contractors, and Airlines.

rTooltrack™, by Supply Insight, is a simple turnkey solution for locating tools and other assets. rTooltrack™ uses passive radio frequency identification (RFID) technology minimizing the time spent completing inventory and locating missing items with a software interface that is easy to configure and use. Compared to barcodes, identifying items with RFID is exponentially faster and does not require line of sight.

Entering new assets

Enter an asset with as few as two clicks, a keystroke and two trigger pulls, or you can import multiple assets from your existing relational database.

Locate

Finding an RFID tagged tool has never been easier. Just pull the trigger and wait for the beep.

Inventory

Using only your handheld, make a list of your tools and verify their existence within seconds.

Check-In/Check-Out

Assign, check-in and check-out tools from the mobile device.

Supported Hardware

rTooltrack™ supports mobile readers from leading vendors including the Motorola MC9090, MC9090Z, MC3090Z, MC3190Z, MC9190 and MC70 and the Intermec CN3, CN4 and IP30.
