Safeguard your software and data in the face of dust, sand, mud, humidity and extreme temperature. Conduct inspections, collect information, capture photos and communicate with headquarters, all with the assurance that your data is protected. If this sounds like your everyday reality, take a closer look at the Trimble Yuma rugged tablet computer.

Survive-ability

The Yuma rugged tablet was designed to be fully functional in any outdoor environment – no matter how extreme.

Overcoming the elements presents an initial challenge, since water, dust and dirt easily threaten the internal components of all but the most rugged of outdoor computers. The Yuma rugged tablet features an ingress protection rating of 67 (IP67), meaning it's sealed against dust and has been water immersion tested for 30 minutes at a depth of one meter. Water and dust won't sideline your Yuma rugged tablet.

Shock, vibration and extreme temperature fluctuation present a second level of challenges to outdoor computing. Its rugged design incorporates a solid state hard drive, eliminating internal moving parts and providing protection against stress from impact and vibration. In addition, MIL-STD-810F specifications ensure that your Yuma rugged tablet computer survives bitter cold, blistering desert heat and everything in between – even accidentally launching your Yuma rugged tablet off the tailgate of your truck.
